Evacuation

During the process of evacuation the following steps to be followed:

1. Evacuation Plan to be activated by the Incident Commander as per floor wise plan.
2. Evacuation Plan to be followed as per the floor map of the Hospital Building highlighting the EXITS.
3. Lifts should not be used.
4. Ramp and staircases should be used.
5. Ambulatory Patients to be escorted either by the attendant or hospital staff as directed to a makeshift safer area.
6. Non- ambulatory/patients in Ventilation, etc to be shifted as per the protocol devised by the department concerned.
7. Exit doors to be kept open all the time for emergency use in all areas.

The Evacuation priorities for the transfer of patients are as follows:

- 1st: Small children and babies, patients who are not connected to machines and can walk.
- 2nd: Patients who can move using a wheelchair or walker.
- 3rd: Patients for whom a stretcher is required for transport.
- 4th: All patients in the intensive care unit.
- 5th: Patients with the least probability of living.
