

The Institute has established mechanisms for consultation with and representation by stakeholders in matters relating to policy formulation and implementation through various statutory and administrative bodies such as the Governing Council, Standing Finance Committee, Academic Committee, Hospital Administration meetings, Grievance Redressal Committees, and interactions with recognized employee associations and other stakeholders, wherever applicable.

Suggestions/grievances received from patients, employees, students, and other stakeholders are examined and considered by the competent authority through the prescribed mechanism.

However, no separate formal mechanism exists for direct participation of the general public in policy formulation except as provided under the relevant rules, regulations, and administrative procedures of the Institute.
